

FUNSCRIPTFORGE • LIQUID RELEASING

Design system — specimen book

Brand, color, type, motion, and component foundations for the FunscripForge desktop UI and its forge-family siblings. Every token, swatch, and component carries the workshop voice: precise, declarative, quietly confident.

VERSION	DATE	LICENSE
0.5.0-alpha	May 7, 2026	MIT

01	Brand mark	08	Radii
02	Primary palette	09	Shadows
03	Neutral palette	10	Spacing
04	Semantic palette	11	Buttons
05	Funscrip chart palette	12	Inputs
06	Type scale	13	Badges
07	Mono type	14	Tone cards

Brand mark

The FunscriptForge wordmark and the family of painterly forge motifs — anvil, spark, oven, worktable, tongs. The brand glyph is the only vector mark; everything else is rendered painterly PNG.

brand glyph

anvil

spark

oven

worktable

tongs

Primary palette

One saturated color in the system: brand red, with a lighter hover variant and a warm orange used for forge metaphors and secondary highlights.

Neutral palette

Near-black surfaces from page background to recessed inputs, plus the three foreground tiers. Most depth comes from a 1px hairline, not a glow.

Semantic palette

Pass / caution / fail — kept narrow on purpose. Status colors carry semantic weight; emoji do not.

Chart palette

Funscrip visualizations are not painted from the brand palette — they encode velocity and amplitude as color. Two chart modes: monochrome for bulk overviews, vibrant for selected-pharse detail.

Funscrip chart — velocity / amplitude

slow / shallow

fast / deep

Type scale

Inter on UI, eight steps, designed for dense data panels at 1080p+. Tracking is tightened only on display and h1; everything else sits at default tracking.

pill

Shadows

Subtle on dark — most depth comes from a 1px border, not a glow. Reserved for hovered cards, modals, and the focus ring.

Buttons

Primary lifts on hover (translateY-2px + drop shadow). Secondary swaps border to accent. No color shift on the primary; the motion is the affordance.

Inputs

Surface-2 inputs with hairline borders. On focus, lift to border-strong; on error, switch to danger.

Badges

Status badges use the semantic palette; chips use the brand red for selected state.

Tone cards

Six tones plus a default fallback — painterly forge-themed PNGs on black, sized 1024×1024. Each has a distinct visual motif. Never reinvent these.
